

My name is Fanny Mossberg, and I am a PhD student in didactics at the Gifted doctoral program, Mälardalen University (MDU). I have a background as a special needs teacher. In my PhD research I will focus on inclusive education. The aim is to investigate giftedness in Swedish preschool and school, influencing environmental factors for early identification, teachers' didactical choices and children's development over time. I will conduct a literature review, a longitudinal multiple case study where I follow some gifted children from preschool to first year in school (ages 5-7) and examine how their teachers recognize their giftedness, implement teaching, and create opportunities for development and well-being. I will also perform an interview study with parents.

Please, do not hesitate to contact me if you are interested in my research work or would like to take part.
